Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Incident Record-Type File

V4001: INCIDENT RECORD TYPE

Source code: Record Type 4

Value	Label	Unweighted Frequency	%
4	Incident record	9324	100.0 %
	Total	9,324	100%

Based upon 9,324 valid cases out of 9,324 total cases.

- Minimum: 4.00
- Maximum: 4.00

Location: 1-1 (width: 1; decimal: 0)

Variable Type: numeric

YEARQ: YEAR AND QUARTER OF INTERVIEW (YYYY.Q)

Source code: ICPSR_YEARQ

Notes: This year and quarter variable is formatted YYYY.Q where Q is 1, 2, 3 or 4. It allows for easier sorting and matching of data files.

Value	Label	Unweighted Frequency	%
2023.1	-	2463	26.4 %
2023.2	-	2303	24.7 %
2023.3	-	2090	22.4 %
2023.4	-	2468	26.5 %
	Total	9,324	100%

Based upon 9,324 valid cases out of 9,324 total cases.

- Mean: 2023.25
- Median: 2023.20
- Mode: 2023.40
- Minimum: 2023.10
- Maximum: 2023.40
- Standard Deviation: 0.11

Location: 2-7 (width: 6; decimal: 1)

Variable Type: numeric

IDHH: NCVS ID FOR HOUSEHOLDS

Source code: ICPSR_IDHH

Notes: ICPSR added this variable to facilitate matching of data files. The ID for households is unique within a six month interview period. Given the rotating panel design of NCVS, a value of IDHH may appear in a year of data one, two, or three times. The variables YEARQ and IDHH uniquely identify a household at a given interview within the NCVS.

Based upon 9,324 valid cases out of 9,324 total cases.

Location: 8-32 (width: 25; decimal: 0)

Variable Type: character

IDPER: NCVS ID FOR PERSONS

Source code: ICPSR_IDPER

Notes: ICPSR added this variable to facilitate matching of data files. As with the IDHH, the ID for persons is unique within a six month interview period. Given the rotating panel design of NCVS, a value of IDPER may appear in a year of data one, two, or three times. The variables YEARQ and IDPER uniquely identify a household at a given interview within the NCVS.

Based upon 9,324 valid cases out of 9,324 total cases.

Location: 33-59 (width: 27; decimal: 0)

Variable Type: character

V4002: ICPSR HOUSEHOLD IDENTIFICATION NUMBER

Source code: ICPSR_V4002

Notes: The ICPSR has attached, (within a collection quarter), a sequential household identification number to every record. This number uniquely identifies each household record within a collection quarter, and is also used to link person and incident records to the appropriate household.

Based upon 9,324 valid cases out of 9,324 total cases.

- Mean: 35884.12
- Minimum: 1.00
- Maximum: 64652.00
- Standard Deviation: 18832.44

Location: 60-64 (width: 5; decimal: 0)

Variable Type: numeric

V4003: YEAR AND QUARTER IDENTIFICATION

Source code: Year/Quarter

Notes: This variable identifies the year and the quarter of the interview. The first two digits of this field represents the year, and the last digit represents the quarter.

Value	Label	Unweighted Frequency	%
231	2023, 1st quarter	2463	26.4 %
232	2023, 2nd quarter	2303	24.7 %
233	2023, 3rd quarter	2090	22.4 %
234	2023, 4th quarter	2468	26.5 %
	Total	9,324	100%

Based upon 9,324 valid cases out of 9,324 total cases.

- Minimum: 231.00
- Maximum: 234.00

Location: 65-67 (width: 3; decimal: 0)

Variable Type: numeric

V4004: SAMPLE NUMBER

Source code: Sample Number

Two-digit code used to identify the sequence and source of selection of sample housing units.

See section - Census Sample Information.

Value	Label	Unweighted Frequency	%
19	-	1630	17.5 %
20	-	2204	23.6 %
21	-	2536	27.2 %
22	-	2954	31.7 %
	Total	9,324	100%

Based upon 9,324 valid cases out of 9,324 total cases.

- Mean: 20.73
- Median: 21.00
- Mode: 22.00
- Minimum: 19.00
- Maximum: 22.00
- Standard Deviation: 1.09

Location: 68-69 (width: 2; decimal: 0)

Variable Type: numeric

V4005: SCRAMBLED CONTROL NUMBER

Source code: Scrambled Control Number

Notes: Beginning with the quarter 1, 2015 NCVS PUF, Census used the 2010 sample design control number scrambling routine to

scramble control numbers for 2010 sample design cases.

Beginning with the quarter 1, 2006 (YEARQ = 2006.1) NCVS data files, Census used the 2000 sample design control number scrambling routine to scramble control numbers for 1990 and 2000 sample design cases. Therefore, data users will not be able to match 1990 sample design cases on NCVS data files released for quarter 1, 2006 and beyond (YEARQ >= 2006.1) to 1990 sample design cases on NCVS data files prior to quarter 1, 2006 (YEARQ <= 2006.1).

Scrambled control was expanded to 20 characters in 2005 Q1. Consequently it was defined as a string variable.

Beginning in July 1986 the previously used PSU, segment number, check digit and serial number are scrambled together by the Census Bureau as one variable to preserve confidentiality.

For 1980 sample-first 10 digits -- last four digits are blank (through quarter 4, 1995). For 1990 sample-all 14 digits are used (beginning quarter 3, 1995). Scrambled control number (part) - See V4007 for last two digits of scrambled control number.

Based upon 9,324 valid cases out of 9,324 total cases.

Location: 70-89 (width: 20; decimal: 0)

Variable Type: character

V4006: HOUSEHOLD NUMBER

Source code: Household Number

Notes: This number identifies the sequence of households that occupy a particular address. For example, if a new family moves into a sample unit being interviewed for a second time, the household number will be "2" indicating that this is a different household from that previously interviewed.

Value	Label	Unweighted Frequency	%

- Standard Deviation: 0.50

Location: 90-90 (width: 1; decimal: 0)

Variable Type: numeric

V4008: PANEL AND ROTATION GROUP

Source code: Panel/Rotation

Notes: The "tens" digit identifies the panel; the "units" digit identifies the rotation group. For example 16 represents panel 1 and rotation group 6. Together, the digits identify clusters which are used in conjunction with the rotation chart. See section - Census Sample Information.

V4019: ENOUGH DETAIL TO DISTINGUISH INCIDENTS

Can you (respondent) recall enough details of each incident to distinguish them from each other?

Source code: 610

Notes: Beginning January 1999 Census deleted source code 611 (variable V4020) and expanded Source code 612 (V4021) from 7 answer categories to 9 and from a 1 digit field to a 2 digit field. Prior to January 1999 both Source codes 611 and 612 were single digit fields. Beginning in Census used the extra single digit field obtained from deleting source code 611 to expand Source code 612 to a two digit field.

For interviews conducted in 1998 Source code 611 (variable V4020) may contain valid values. For interviews conducted in 1999 it is coded 9 Out of universe.

Source code: OCCCODR

Notes: This variable started in quarter 3, 2001.

Note: Prior to 2017, this variable also included a category for Military specific occupations (Category 43). No Public Use File has ever had respondents in this category, however. Respondents originally assigned this military category were always recoded as part of data processing to new occupations, based on information about their military job duties. For this reason,

the BJS decided to remove Category 43 as a possible value beginning in 2017.

Source code: VICTIMIZATION WEIGHT

This variable is NOT adjusted to series crimes. For the victimization rate adjusted for series crimes see the Series Weight (SERIES_WEIGHT).

Beginning in 2006 Q1, Census began applying a bounding adjustment to the incoming sample (TIS=1). This adjustment is implemented to counteract the effects of including the bounding interview on the NCVS PUF. Before 2006, the bounding interview is excluded from the PUF.

In addition, because of evidence that victimization rates may vary by the number of times the household has been interviewed, Census applies an additional adjustment to TIS > 1 cases whenever sample design changes (such as reinstatements or phase-in of new sample areas), meaning that a portion of the sample will not be interviewed the full seven times. For TIS > 1 cases that are not adjusted in this way, the victimization weight is the same as the person weight or household weight for personal and property crimes, respectively.

Notes: This variable started in quarter 1, 2005.

Notes: Beginning Q1 2019, at the request of BJS, the variable Victimization Weight (V4532) has been added back to the Incident Record.
